

ITRF2014P Evaluation by the IDS CC

Guilhem Moreaux

- **Discontinuities**

- 62 at 32 sites.
- 23 from seismic origin.
- 10 from beacon origin.
- 35 discontinuities are in the IDS 09 cumulative solution.
- 24 discontinuities were already in ITRF2008.

- **Post-Seismic Deformations (PSD)**

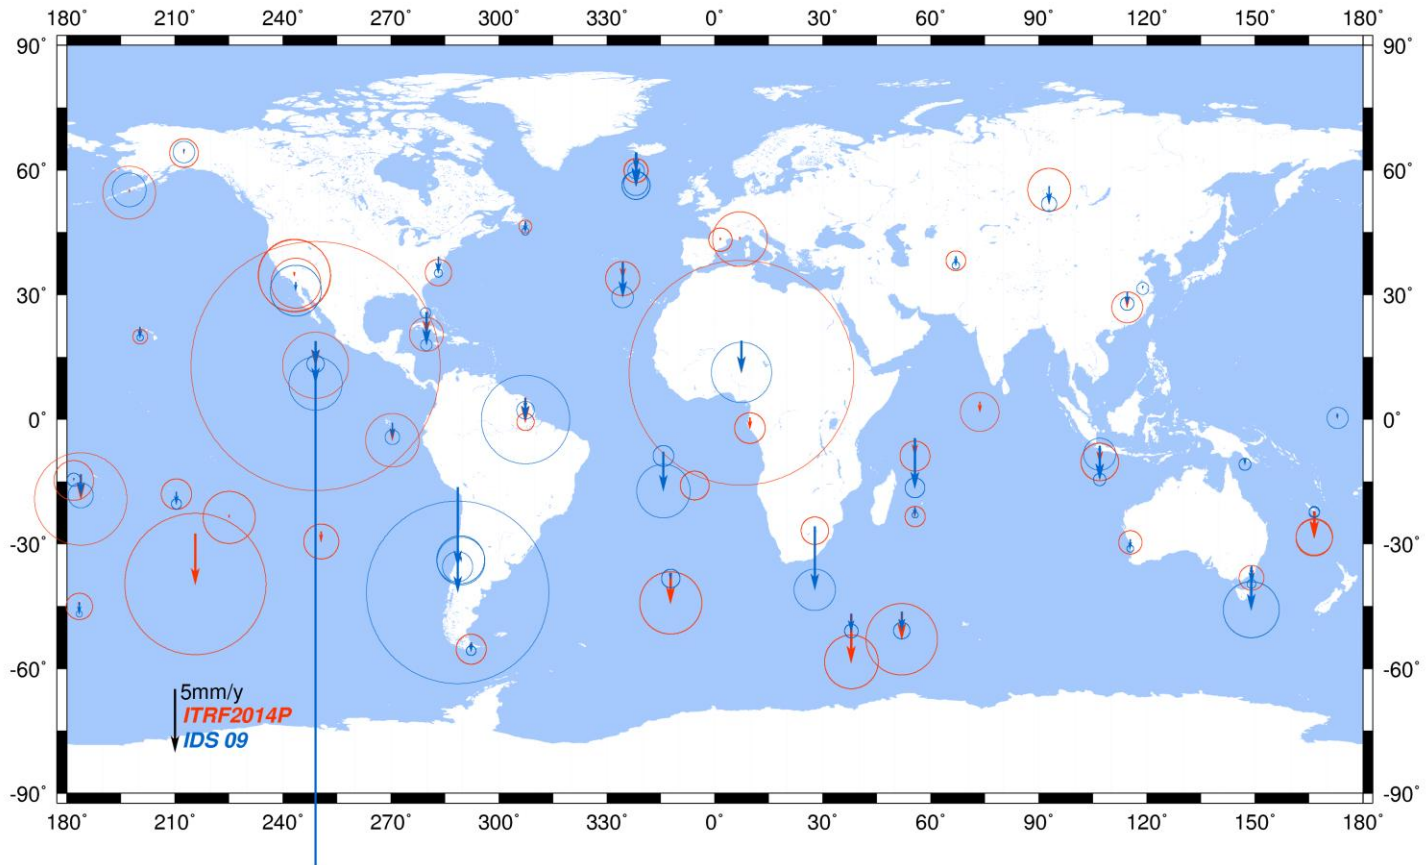

- 12 beacons at 7 sites (Arequipa, Fairbanks, Goldstone, Reykjavik, Santiago, Terre Adélie, Yuzhno-Sakhalinsk).
- One site is out of order: Yuzhno-Sakhalinsk.
- **Not used in the estimations of station position residuals.**

Horizontal Velocities ITRF2014P vs IDS 09

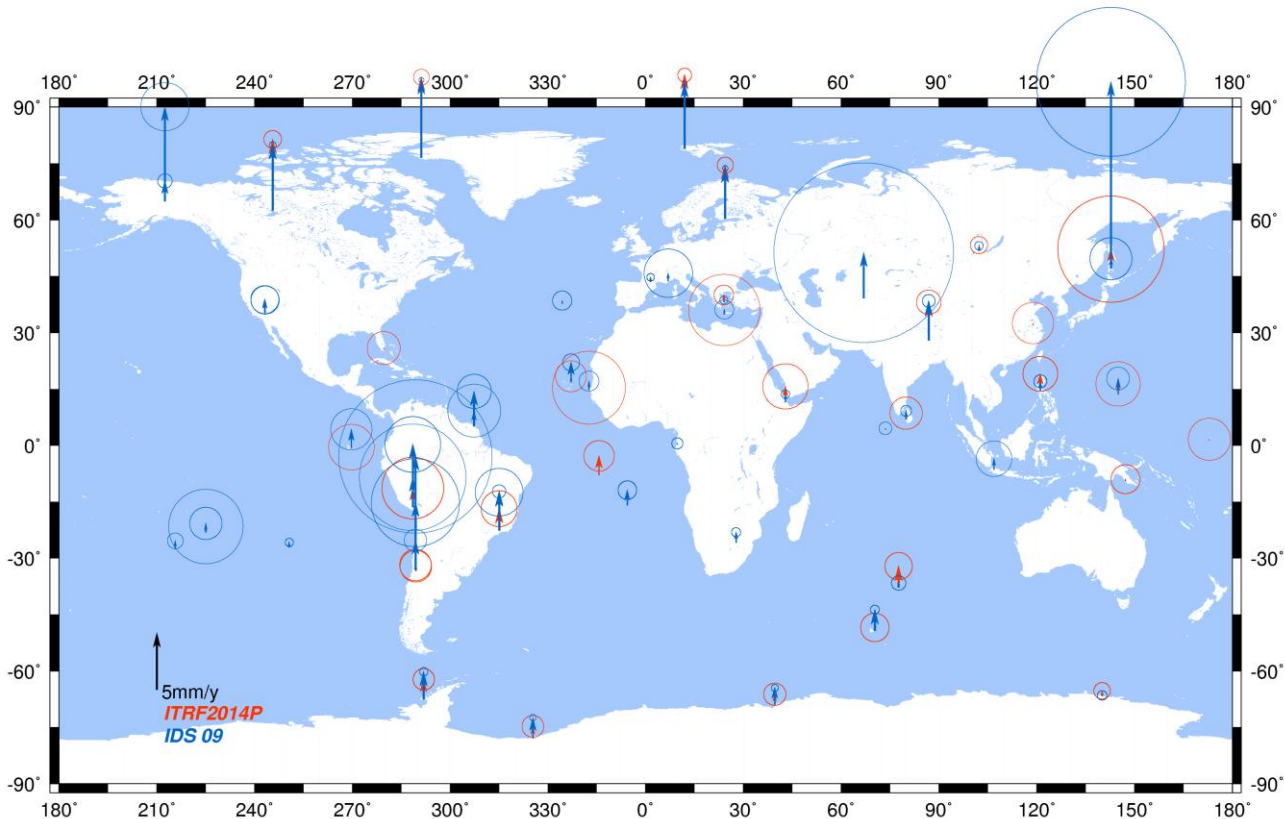

- Selection of velocities with uncertainties smaller than 5 mm/yr.
- Solutions similar even if differences in the discontinuities.

Downward Velocities ITRF2014P vs IDS 09

- ❑ Selection of velocities with uncertainties smaller than 5 mm/yr.
- ❑ Major differences in Socorro and Arequipa (seismic activities).

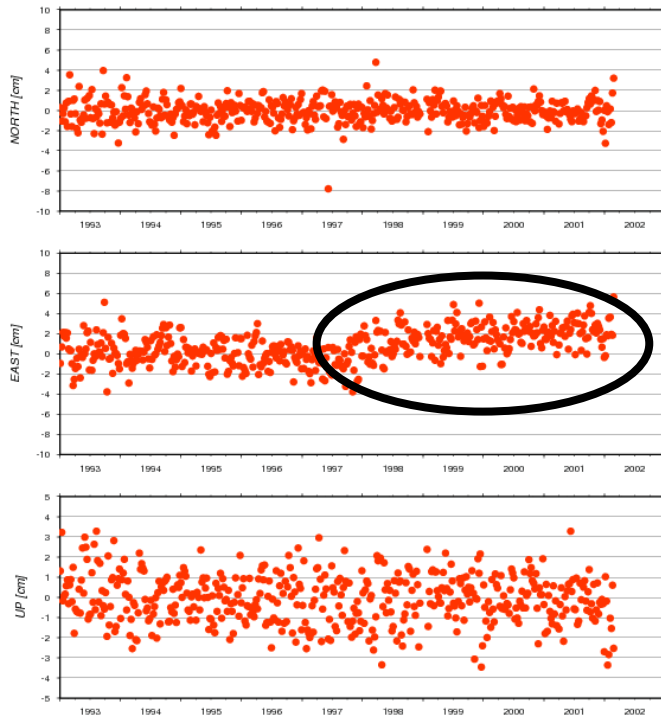

Upward Velocities ITRF2014P vs IDS 09

- ❑ Selection of velocities with uncertainties smaller than 5 mm/yr.
- ❑ Major differences in Arequipa, Santiago and Yuzhno-Sakhalinsk (sites with PSD corrections).

Station Position Residuals – Terre Adélie

IDS 09 wrt ITRF2014P

IDS 09 wrt IDS-TRF2014

❑ Residuals wrt ITRF2014P are impacted by un-use of post-seismic deformation model.

Station Position Residuals – Easter Island

IDS 09 wrt ITRF2014P

IDS 09 wrt IDS-TRF2014

- ❑ Both IDS 09 and ITRF2014P include discontinuity in 2011 doy 86 (2011/06/30) while the beacon is changed.
- ❑ Meanwhile IDS 09 does not constrain the velocity to the same value over the 2 epochs.

Station Position Residuals – Fairbanks

IDS 09 wrt ITRF2014P

IDS 09 wrt IDS-TRF2014

❑ Residuals wrt ITRF2014P are impacted by un-use of post-seismic deformation model.

Station Position Residuals – Manila (MANB)

IDS 09 wrt ITRF2014P

IDS 09 wrt IDS-TRF2014

❑ Velocity constrain in ITRF2014P while Earthquake in 2012/06/16 ?

- **IDS CC suggests to reconsider velocity constraints in Easter Island and Manila.**
 - **ADGB has wrong DOMES number (91501S001) in ITRF2014P-psd-doris.dat.**
 - **ARFB: soln 1 ends in 07:231 and soln 2 starts in 07:230.**
 - **REYB has no solution numbers 1 and 3, not 2.**
 - **REZB: soln 1 ends in 05:079 and soln 2 starts in 05:078.**
 - **SANB: soln 1 ends in 06:008 and soln 2 starts in 06:007.**
- Check epochs of sites with PSD corrections.**

Preliminary Conclusions (2/2)

- **What is the ellipsoid which has been used to estimate NEU corrections ?
 $A = 6378137\text{m}$ $E2 = 0.00669438003$?**
- **Unused of PSD corrections → centimetric differences even several years after the Earthquake.**
- **Logarithmic term for Fairbanks, Terre Adélie, Reykjavik and Santiago.**
- **Logarithmic and exponential development of PSD corrections**
 - i) In case of logarithmic term, corrections goes to infinity while time goes to infinity.**
 - **PSD corrections must be used for sites with logarithmic terms.**
 - ii) In case of no logarithmic term, corrections goes to a constant while time goes to infinity.**
 - **for sites with no logarithmic terms, after a while, PSD correction can be assumed to be constant.**

- **Due to the centimetric impact of un-use of PSD corrections, IDS CC has implemented these corrections in the IDS CC software.**
- **PSD corrections are based on correction file and subroutine made available by Zuheir in the frame of ITRF2014.**
- **PSD correction implementation has been validated from the single estimation given by ZA (ARFB in 2005/01/01).**
- **Afterwards, there are biases between Zuheir and IDS CC estimations due to use of different reference coordinates.**

PSD corrections - Santiago

From Zuheir Altamimi

IDS CC - SANB

SANT_41705M003 trajectory

Trajectory : Blue: Raw, Green: Linear, Red: PSD model
Vertical gray lines represent discontinuities

SANB_41705S009 trajectory

Trajectory : Blue: Raw, Green: Linear, Red: PSD model
Vertical gray lines represent discontinuities

(ITRF2014: Etat d'avancement et résultats préliminaires - CCT PDS – Toulouse, September 30th, 2015)

What's next ?

- **Plots with PSD corrections, IDS 09 time series and IDS 09 velocities.**
- **IDS CC propose to made available to the IDS ACs XYZ and NEU corrections in Ascii file. One file per station and one line per week until 2020.0.**
