

## March 3, 2008

DPOD2005 (in process)

All positions and velocities are expressed in ITRF2005

In the following columns :

Status could be :

- OK final proposal (Pascal Willis and John Ries agreed, no special compalin was received from the rest of the group) in black
- TBC to be confirmed = proposed coordinates and velocities exist but are not confirmed in green
- TDB to be done = investigation still in progress in red

Source could be :

- ITRF2005 = original [ITRF2005](#) file computed by IERS (same positions n 2000.0 and same velocities)
- DPOD2005 = coordinates and velocities were derived from the DPOD2005 investigation
- AMTB = coordinates were derived from station AMTB in original ITRF2005 file, adding the geodetic local tie from AMTB

For each station acronym, several periods are potentially selected. For each period of observation a proposed model is provided (position in ITRF2005 at epoch 2000.0 and velocity in ITRF2005). In a few cases, the model states « XXX » meaning that no data should be used during this period for this specific DORIS beacon.

Click on acronyms to get more info

Acronym	DOMES	Period (start time)	Period (end time)	X (ITRF2005) - 2000.0	Y (ITRF2005) - 2000.0
