# What's new?

## ■ Data

- issue about the initial values of CoM
- description of SARAL's maneuvers with 3 thrusts instead of 1 in the maneuver file srlman.txt

## ■ Products

- delivery of GDR-E orbits

## ■ Website

- 3D satellite animations and new page « Missions » (in progress)
- new tables of Data and Products
- new page Documentation
- IDS Workshop and AWG presentations on one page
- new table members of Governing Board

## ■ Webservice

- new EOPtool

## ■ Ftpsite

- lists of Earthquakes, discontinuities ITRF2008, evolution of Constellation

## ■ Other: check ACs summaries

- CNES/SOD has adopted new values for SARAL (see document POE Models)
- CNES suggests to remove initial values in header (AWG telecon 2015/09/24) instead of to change the values
- ACs need an easy way to get the initial values for the data processing (ie not in a document)
- IDS BC proposes to remove initial values in the header of the satmass.txt files and to create a new file with the list of initial values
  - + this file contains only one type of data: the initial values
  - + the satmass.txt files will contain only one type of data: the variations
  - data into two separate files
- Proposals:  
[satmass.txt](#)    [MassCoMInitialValues.txt](#)

# SARAL maneuvers and maneuver file

(see LS'email to AWG, 2015/08/19)

- CNES proposes to describe SARAL's maneuvers with 3 thrusts instead of 1 in the maneuver file `srlman.txt`
- The objective is to take into account the new strategy defined by ISRO to perform SARAL attitude control
- The format of the maneuver files allows this possibility (<ftp://ftp.ids-doris.org/pub/ids/satellites/man.readme>).
- The first and the third burns will only give the date of the yaw rotations. Corresponding thrust values will be null. Duration should be 0 but 1 or 2 ms will be preferably introduced.

→ AWG consulted; no negative opinion is expressed

Sp3 orbits in the new GDR-E standards flagged with a version number VV=10 in the file name

- Cryosat-2 orbits in GDR-E standards available for the whole mission  
Jason-1 POE orbits reprocessed and available for the whole mission
- Jason-2 POE orbits switched to the GDR-E standards from cycle 254.  
Saral POE orbits switched to the GDR-E standards from cycle 25.
- HY-2A POE orbits will switch to the GDR-E standards at a later stage.  
Envisat POE orbits will be reprocessed at a later stage.
- Spot-5 POE orbits will be kept in the GDR-D standards and the past Spot satellites orbits will not be reprocessed.
- Jason-3 POE orbits will be produced in GDR-E standards from cycle 1.

Previous series moved to subdirectories GDR-C and GDR-D  
**Cryosat-2, Jason-1: only GDR-E orbits in the current directory**

See file `doris/products/orbits/ssa/README_SP3.txt`

# 3D satellite animations

**Objective: Propose pedagogical materials to visualize the DORIS satellites in orbit**

**VTS + satellite 3D models + orbits, quaternions, SA angle  
→2D and 3D visualizations → animations (.avi)**
