2002 IDS Analysis campaign

*Objective: to initiate analysis of station positions
Participation*

Sinex with full variance

Analysis strategy

- Internal consistency of each AC time series (week-month)

CATREF global combination software (Altamimi)

Minimum constraint equation to express all individual solutions in the same datum
Helmert Transformation
iteration (outliers editing)

- No AC combination possible yet to derive a DORIS technique product (at least 3 AC needed)

*Analysis campaign report available on the IDS analysis coordination web page
