

DORIS System status, and future missions

P. Ferrage, G. Tavernier, A. Auriol

The DORIS System (Doppler Orbitography and Radio positioning Integrated by satellite) is always maintained at the at the top level of performance thanks to permanent improvements in the system and its components.

Current "DORIS" Satellites in flight and future missions will be presented with associated on board instruments features, as well as a prediction of the Doris constellation evolution so as to warrant the quality of geodetic applications, reference frame and POD contributions.

The DORIS Stations Network is also continuously improved and controlled, a general status will be reminded : availability, deployment, fonctionning.
